Session 9.1 Transitions of Online Learning and Teaching	20
Thursday, June 5	21
Times listed in this program are Pacific Daylight Time (Victoria, BC)	21
10:00 - 11:00 PDT Keynote Jennifer Wemigwans - Remote from Congress in Toronto	21
1:30 - 2:30 PDT Keynote George Veletsianos	21
Friday, June 6	22
Times listed in this program are Pacific Daylight Time (Victoria, BC)	22
9:10 - 10:10 PDT Presidential Address Valerie Irvine & Stephanie Moore	22
1:45 - 2:05 Publication Pathways Michele Jacobsen & Valerie Irvine	22
2:05 - 2:15 Break	22
2:15 - 3:15 Victoria Concurrent	22
3:15 - 3:30 Online Closing - Jon Dron	22

Welcome

Figure 1: OTESSA Logo

All times are Eastern Daylight Time

Current time in Toronto (UTC-04:00 | [Click for more info](#))

! Important

[Check the OTESSA conference website for abstracts](#) and any changes to this program. Information about any changes to the program will also be available via the OTESSA Welcome Desk on the conference platform once the conference opens.

All OTESSA Participants can attend the [Congress “Big Thinking” lecture series](#). These take place each day of the conference. Congress has “[open events](#)” available as well (open to registrants across association conferences at Congress as well as those who hold community passes).

All OTESSA Registrants can also attend conference sessions offered by the [Canadian Association for the Study of Education \(CSSE\)](#), [Canadian Association for the Study of Higher Education \(CSSHE\)](#), and [Canadian Association of Learned Journals \(CALJ\)](#) as we have reciprocity agreements in place. Please note that presenters must register in each conference in which they are presenting.

Monday, June 2

 Note!

Online Sessions

Times listed in this program are Pacific Daylight Time (Victoria, BC)

Victoria, BC

Santa Fe, NM

Toronto, ON

8:30 - 9:00 | Conference Welcome, Announcements, & Land Acknowledgement

Location

9:00 - 10:00 | Keynote: Thomas Reeves

Location

10:00 - 10:15 | Break

10:15 - 11:15 | Concurrent Session 1

(60 Mins)

Session 1.1 | Addressing Inequities

Card Sorting as a Methodology for Discovering Underlying Needs of Communities Seeking to Develop Learning Spaces: Towards a Better Understanding of the Sociocultural Ecology

Trottier 0060 (Session A) | Research

Marguerite Koole | *University of Saskatchewan*

Gordon Rugg | *Keele University*

Thiago Lemes de Oliveira | *Wolverhampton University*

Valentina Arancibia | *Federal University of Uberlândia*

Redouane Touati. | *Universidad Católica del Maule & Yahia Fares University, Médea*

Abstract

In this paper, we focus on a knowledge elicitation method called single-criterion card sorting. To begin, we will provide a background two of the communities with whom we have been working: a Deaf and Hard of Hearing community in Canada and a community in Algeria. After briefly describing the context of the project, we will provide a description of, rationale for, and challenges with card sorting as a preliminary method. Next, we will explain the card-sorting procedures, present the preliminary data, and explain the analysis procedures. Although there are many kinds of card sorting, we will guide participants through a hands-on exercise using single-criterion card sorting (using both digital and in person techniques). Participants will learn about text-based, image-based, and object-based options, when to use card sorting, how to collect data, and how to analyse card sorting data through visual-numeric ‘heat maps’ (co-occurrence matrices). We can share a free Java-based software tool for generating heat maps.

Put simply, the paper provides a discussion of the data and how the data will guide the selection of subsequent knowledge modelling methods that will guide further analysis and hopefully help to gain a better, in-depth understanding of the communities’ needs and aspirations that may otherwise remain hidden beneath social, cultural, and linguistic barriers. With careful selection of knowledge modelling methods, we hope to help limit bias and the perpetuation of English and Western ways of doing and knowing. Meaningful consultation and collaboration can help to ensure that the communities’ interests remain at the heart of the project(s) and reduce Western (‘outsider’) control of research, analysis, and development.

Session 1.2 | Transitions of Online Learning and Teaching

Evolving our understanding of technology-integrated assessment: A review of the literature and development of a new framework

Trottier 2100 (Session C) | Research

Colin Madland | *University of Victoria*

Valerie Irvine | *University of Victoria*

Christopher DeLuca | *Queens University*

Okan Bulut | *University of Alberta*

Abstract

In this paper, we review the literature on technology in assessment in higher education and compare how the literature aligns with the Assessment in a Digital World framework (Bearman et al., 2022). We found themes in the literature that were not present in the framework (e.g., academic integrity and faculty workload) and constructs in the framework not evident in the literature (e.g., future self and future activities). Additionally, we consider other gaps in both the framework and the literature evident in day-to-day practices and government legislation or mandates, such as considering legal or ethical aspects of duty of care and the integration of Indigenous worldviews. We then developed the Technology-Integrated Assessment Framework to help instructors and administrators consider a broader range of constructs when planning assessment strategies in technology-integrated learning environments and to serve as a basis for further investigation into how the different constructs within the framework contribute to how we design, implement, and teach about assessment in digital learning environments today. We present an introduction of this technology-integrated assessment framework, invite feedback from the OTESSA community, and discuss future research goals and opportunities.

Session 1.3 | Addressing Inequities

Critical reflections on course materials: The rise of the single-use e-textbook and a university library's multi-pronged response

Trottier 2110 (Session D) | Research

Madelaine Vanderwerff & Sara Sharun | *Mount Royal University*

i Abstract

A recent shift by higher education publishers from print to digital content has led to an increase in course instructors adopting digital textbooks and courseware that are rented or sold directly to students. These digital courseware systems are attractive for a number of reasons: they are customizable, contain integrated value-added features, and are often marketed as inclusive, accessible, and cost-saving. However, there is debate about the impact of these tools on student learning and success, and about the challenges they create for learners, including restricting, controlling, and monitoring access and use. Our library has undertaken a number of distinct but related initiatives to support faculty in transitioning away from commercial textbooks in their courses. In this session, we will share a number of initiatives that invite faculty to critically reflect on course material selection, raise awareness about the challenges of commercial textbooks, and offer support for transitioning to OER, freely available, or library-licensed materials in their courses. This session will share findings from our research and collaboration with stakeholders on campus.

Participants will be invited to share their experiences and discuss the potential long-term impacts of, and responses to, the commercialization and commodification of learning materials on their campuses.

11:15 - 11:45 | Break

11:45 - 12:45 | Concurrent Session 2

(60 Mins)

Showcase 2.1 | Sustaining Positive Change

Design of Learning Experiences for Cyranoids & Echoborgs

Amanda Tkaczyk | *Independent Scholar*

i Abstract

Cyranoids are individuals whose communication is determined by another person in real time (Milgram S., 1992). Echoborgs, a subset of Cyranoids, are individuals whose communication is determined by artificial intelligent agents (Corti, K., & Gillespie, A., 2015). With the widespread adoption of generative artificial intelligence tools that will enable the next generation of Echoborgs with highly sophisticated tools to mediate their human-

to-human interactions, we are thrilled to explore the design of educational experiences for Cyranoid and Echborg learners. This project will include instructional materials and tools to support the learning and professional development of Echborgs in your classroom, community, and workplaces. Online attendees can review materials and interact with chatbots. In-person attendees will have the opportunity to engage with a kiosk of learning materials and practice their interactions with a live Echborg learner. This critical design project will present an exploration of how the future of education might adapt in response to AI-augmented & AI-dependent learners. We will explore themes of technology adoption, responsibility, ethics, equity, and care in this speculative educational design project.

Showcase 2.2 | Transitions of Online Learning and Teaching

Artifacts from the Futures of Higher Education

Elisa Arnold, Rocio Chavez Telleria & Laura Viselli | *eCampus Ontario*

Abstract

How we think about the future informs the decisions we make today; however, it is sometimes difficult to imagine what the future might look like. Foresight is a discipline and methodology that helps us think systematically about possible ways the future might play out and expands the solution space. Experiential futures, a subset of foresight methodology, is a way to consider different possible futures by interacting with imagined objects or environments of the future and develops capacity for futures thinking.

The Research and Foresight team at eCampusOntario has created four artifacts, grounded in foresight methodology, capturing different ways one can think about technology in higher education. These artifacts are based on the team's foresight trend research and explore possible future roles of technology. To facilitate the discussion and support analysis, we will use a foresight informed discussion toolkit developed by our team. This workshop will introduce attendees to the methodology of experiential futures to advance their capacity for futures thinking.

Showcase 2.3 | Addressing Inequities

Generative Friction: A Chatbot Interface Experiment

Ben Taylor & Devon Mordell | *McMaster University*

Abstract

Faced with the rapid adoption of generative artificial intelligence (GAI) in everyday life, educators are working to envision the role of this technology and routinely navigating its ethical use. Although the broader social, cultural, and environmental costs of the technology are well-documented, they are normally obscured by digital user interface experiences that “just work.” The practice-based design exhibit we are proposing is a GAI chatbot application that intentionally disrupts the user interface with details about the effects of each text input and output beyond the surface of the computer screen. Drawing on critical interface analyses, speculative design methods, and an interrogation of dark design patterns, we will attempt to make visible the past and potential future effects of GAI, including resource consumption, exploitative labour practices, perpetuation of biases, and an increase in economic divides. During this session, we will demo the application and then allow for full audience engagement with the exhibit as we speak to the documentation of our design process. Our intention is to introduce a thoughtful and generative friction into the chat interaction, reclaiming so-called malicious techniques (e.g., distraction, interruption, obfuscation, and shock) to playful and socially productive ends.

Showcase 2.4 | Addressing Inequities

Decolonizing Educational Design: Toward Justice by Design in Higher Education

Rebecca Sweetman & Yasmine Djerbal | *Queen's University*

Abstract

As institutions commit to strategic initiatives for justice in higher education, this session shares practical ways to walk the decolonial talk in the design of education. Delving into critical design as a transformative tool and pedagogy, we seek to shift how storytellers in higher education craft their narratives. This presentation confronts how we, practically, design an equitable future of learning, including the applied skills required to recognize and challenge our normative biases and design assumptions, and transform our day-to-day work in educational design.

Examining how to mitigate curricular harms and consider the ethics of educational technologies, we introduce a justice by design framework that strategically dismantles oppressive, racist, and colonial epistemologies that unconsciously make their way into course design. Through this presentation, we practice design justice principles and share an open professional training curriculum called “[Activist Design in Educational Multimedia](#)” as an opportunity for intervention. The curriculum employs theoretical and practical techniques to develop the competencies and confidence of educational design profession-

als to apply an anti-oppressive lens in their work. This session presents a multifaceted, practical, and principled approach to critical design that can be integrated across roles, disciplines, and hierarchies to re-story the process and outcomes of educational design.

Session 5.1 | Addressing Inequities

Trottier 0060 (Session A) | Practice (French)

Franchir les obstacles : Améliorer l'accessibilité grâce aux ressources éducatives libres dans l'apprentissage intégré au travail

Andrea Krasznai | *eCampus Ontario*

Abstract

Le projet d'apprentissage expérientiel d'eCampusOntario, le Consortium d'apprentissage expérientiel francophone de l'Ontario (CAPFO), rassemble les institutions postsecondaires francophones et bilingues de l'Ontario pour combler une lacune : le manque d'opportunités d'apprentissage expérientiel dans les environnements francophones et bilingues. En utilisant la plateforme Riipen, nous offrons aux membres du CAPFO la possibilité d'augmenter le nombre d'opportunités disponibles pour leurs apprenants au-delà des frontières géographiques de la province.

Dans le cadre de ce projet, une nouvelle lacune a été mise en lumière : le manque de ressources en français pour les professeur.e.s souhaitant s'impliquer dans l'apprentissage intégré au travail. eCampusOntario a créé des ressources éducatives libres (REL) pour soutenir les professeur.e.s dans le développement de leurs connaissances en matière d'apprentissage intégré au travail. De plus, une enquête de recherche a été menée dans le secteur francophone de l'Ontario pour dévoiler les tendances et les défis, désormais disponibles sous forme de rapport REL dans la bibliothèque ouverte d'eCampusOntario, la plus grande bibliothèque ouverte au Canada.

Au cours de notre session, nous fournirons des informations sur ce qu'est le CAPFO et mettrons en lumière les exigences particulières de la communauté minoritaire franco-ontarienne engagée dans l'apprentissage intégré au travail (AIT). Nous aborderons ensuite les ressources éducatives libres (REL), comment elles peuvent améliorer l'expérience des professeur.e.s dans l'AIT et dévoilerons quelques conclusions clés de notre rapport. Finalement, nous fournirons à notre public un guide REL afin qu'ils puissent initier l'expérimentation et la création de leurs propres REL.

Session 5.2 | Wildcard

Trottier 0070 (Session B) | Practice

9:30 - 10:30 | Unveiling the Future of Language Teaching and Acquisition: Exploring the Conflation of Cultural Historical Activity Theory, and Generative AI

Tanya Dixit & Michael Paskevicius | *University of Victoria*

Abstract

Contemporary technology trends in education are profoundly reshaping the design of teaching and learning languages. This trajectory, Li (2017) observes, can be largely attributed to the “development of learning theories and pedagogical considerations” (p.3) alongside several other contributing factors, a sentiment echoed by Blake (2009) and

Heift and Chapelle (2012) who confirm the far-reaching influence and potential of CALL, which further offers substantial promise to refine and enhance second language (L2) acquisition. Moreover, these scholars unanimously agree that technology integration and implementation should be firmly grounded in research built upon theoretical foundations. Hence, conjoining Cultural Historical Activity Theory (CHAT) (Engeström, 1987) and the affordances of generative AI, exemplified by ChatGPT, this presentation looks at transformative opportunities in which current AI bots can reform classroom teaching-learning discourse. This comprehensive awareness about AI's potentiality to revamp instructional methods, improve learner engagement, and offer avenues for personalizing and differentiating instruction is to be deemed essential not only for equipping stakeholders with the knowledge to navigate the nuances and challenges inherent in optimizing language acquisition experiences, but also to set the stage for a future where learners and educators can seamlessly integrate cutting-edge tools and technologies into improving the language acquisition experience.

10:00 - 10:30 | Personalized learning path in a course on digital technology for secondary education programs

Géraldine Heilporn, Alexandre Lepage, Audrey Raynault & Julie Chamberland |
Université Laval

i Abstract

This communication presents the new design of a course on digital technology for teaching and learning, offered to students enrolled in secondary education programs at Laval University (Quebec), based on the concept of adaptive learning. Following a diagnostic assessment questionnaire of their digital competency at the beginning of the semester, students are automatically assigned to three thematic activities aimed to develop their digital competency for transfer to secondary education. After working on a thematic activity for one week, students return to the classroom for peer-to-peer teaching and learning on these thematic activities, in a blended course modality alternating asynchronous (thematic activities) and synchronous classes (peer-to-peer teaching and learning). Temporary thematic support communities as well as disciplinary learning communities are set to encourage peer collaboration and support throughout the semester. At given time-points during the semester, students also have to assess their peer collaboration and give them feedback a peer evaluation mechanism.

Session 5.3 | Sustaining Positive Change

Trottier 2100 (Session C)

9:30 - 10:30 | Developments in National OER Advocacy in Canada

Ann Ludbrook | *Toronto Metropolitan University*

Michael McNally | *University of Alberta*

i Abstract

This 50-minute session builds upon the Canadian Association Research Libraries (CARL)'s National Advocacy Framework for Open Educational Resources (OER) in Canada (2023). It updates attendees on national OER advancements, and features insights from the Indigenous Knowledges and OER summit held in Vancouver in February 2024. The summit produced principles for working with Indigenous knowledges in OER, alongside discussions on progressing national OER advocacy. The session covers developments in policy, infrastructure, and francophone OER stemming from summits in 2022 and 2023. Reports from these events will be discussed, along with updates on ongoing federal budget consultations and the anticipated 2025 federal election. The audience will also have the opportunity to contribute ideas and strategies for national advocacy, via group discussion and polls.

12:15 - 12:45 | Break

12:45 - 1:45 | Concurrent Session 4

All Session 6 Showcases are in the Trottier Mezzanine

Showcase 6.1 | Sustaining Positive Change

Redesigning Computing for Openness - the Ethics of Consuming Devices

Brian Sutherland | *University of Toronto*

i Abstract

Have you started to accumulate old computing devices? Why does the logic of computing involve repeated purchase and consumption of expensive “molded plastic epics” (Gabrys, 2011)? Thinking back on calculation devices and this ethical problem of repeated consumption, the simple solar calculator stands out for its durability – an energy harvesting strategy that doesn’t use batteries, and it doesn’t wear out. Fifty year old solar powered calculators and other electronic devices which still work may be found. In

this session, proposed for the Ethics in Design Conference Strand, I will review the history of energy harvesting information devices and their significant characteristics around sustainability, present response designs which engage various ethical questions around consumption, carbon production and degrowth, and discuss their usefulness as open designs and thought-artifacts in an iterative speculative design conversation around climate change.

Showcase 6.2 | Sustaining Positive Change

A framework and model for engagement in open, online spaces

Michelle Harrison | *Thompson Rivers University*

Michael Paskevicius | *University of Victoria*

Abstract

This design case provides an analysis of the creation of an innovative open educational practices (OEP) project “Rethink Learning Design”, designed to explore and implement critical approaches to learning and instructional design. We recognized that if we want to embrace the power of OEP to change teaching and learning practice we need to enable spaces that honor multiple voices and perspectives, co-create knowledge and challenge traditional roles and hierarchies supported in open pedagogical approaches. Two key goals guided our project: the development of a reader/resource based on open pedagogy principles, emphasizing inclusivity and participation, and the integration of a reflective practice framework to deepen engagement and bring about a shift in educational practices. In this session and design case we will outline our iterative design process, ethical considerations, and theoretical foundations, and student use and feedback, with the aim of sharing insights and templates for practitioners in diverse educational contexts. We will consider how we can approach design as a theory of action and consider ways to promote learner ownership, open scholarship, anonymity, and options for permanence through our learning design tool.

Showcase 6.3 | Addressing Inequities

Cultural Dimensions of Ethics in Design: Indigenous Knowledge & Online Course Media

Brian Lorraine | *Simon Fraser University*

i Abstract

This session delves into the intricate design process of an online Indigenous Ethnozoology course, exploring the tensions, challenges, and ethical considerations encountered during an 8-month redesign and development period. Originally authored by a Squamish knowledge holder, the course featured recorded lectures intertwining oral histories with western scientific perspectives. The transition to a new instructor, a professor of white settler descent, prompted critical reflection on retaining Indigenous knowledge while improving instructional effectiveness. Drawing on cognitive load theory and empirical studies on video engagement, the design team navigated the complexities of honoring oral traditions while enhancing student learning experiences. This case study highlights the necessity for robust frameworks addressing Indigenous knowledge protocols in educational design, underscored by ongoing critical reflection to confront colonial legacies and promote ethical practices.

Showcase 6.4 | Addressing Inequities

Moving Towards Design Justice through Multivocal Design in Health Education

Danielle Dilkes | *University of Western Ontario*

i Abstract

This Design Case features an interprofessional stroke care case for health and medical education that was developed through a participatory design process. The objectives of the case were to highlight the complexities of interprofessional care and prepare learners for interprofessional practice. The approach to developing this case draws on key Design Justice principles: those most impacted by a design should be central in the design process and that various types of expertise exist and have value. The stroke care case was co-developed with patients, or Lived Experience Experts (LEEs), and all members of an interdisciplinary stroke care team, or Subject Matter Experts (SMEs). Patients were invited to share their real experience of stroke care, which became the basis of the case. Each health care professional was given full control over how their roles were portrayed, and invited to craft and star in their scenes within the case. This process resulted in a multivocal media rich case that more accurately reflects real patient experience and the real scope of practice for different health professionals. In our Design Case Exhibit, we will share multimedia components of the final case, but we will also share design knowledge in support of a more general framework for participatory design that could account for some of the complications of co-design across institutional roles.

1:45 - 2:00 | Break

1:30 - 2:30 | Concurrent Session 5

Session 7.1 | Sustaining Positive Change

An e-Book of One's Own: Empowering Student Learning Journeys

Practice

Terry Greene & Christian Metaxas | *Trent University*

i Abstract

Join our interactive session to explore the transformative initiative, “An e-Book of One’s Own,” designed to reshape the student experience in higher education. In a dynamic environment, participants will engage with Pressbooks, a powerful tool enabling students to craft personalized e-books showcasing their academic journey. The session emphasizes hands-on exploration, collaborative problem-solving, and interactive structures to work towards successful implementation. Reflective exercises simulate the student experience, fostering a deep understanding of the program’s impact. This session is not a passive presentation; it’s a collective effort to redefine educational experiences. Attendees will leave with practical insights, strategies for implementation, and a renewed vision for empowering students through digital innovation.

9:30 - 10:30 | How do students make sense of a Learning Analytic Dashboard? Exploring learners' perceptions and plans

Research

Maribel Miller & Emma Graves | *University of Victoria*

i Abstract

Student-facing learning analytic dashboards (LADs) claim to help students manage their learning. However, many widely available LADs can be inflexible and lack consideration of the contemporary theory and research of learning. Furthermore, it is unclear how students use information presented in LADs and translate it into meaningful action. This descriptive study investigates students' use of a learning analytic dashboard to inform goal-setting and achievement over the course of one week in a large, hybrid undergraduate course. Specifically, we explore (a) learners' evaluations of their course progress after interacting with the LAD (b) types of goals set by students for managing their learning during the week, post-interaction with the LAD; (c) the extent to which learners achieved their goals; and (d) students' perceptions of LAD utility in supporting them to manage their learning. Data were collected through two questionnaires administered at the midpoint of a course. Preliminary findings indicate that after viewing the dashboard, most learners set goals for maintaining their current progress during the week by focusing on their motivation. However, most learners reported failing to fully attain their goal by the end of the week. Implications for supporting learner engagement with LADs students-facing learning analytic dashboards are discussed.
